INTERACTIVE VOTING

duvall voting makes your event more attractive, by actively involving participants in your presentations. **duvall** voting offers you a wide range of options:

Making decisions
The voting system can be used for votes with a simple majority and in situations when a weighted majority is required (such as a shareholders' meeting). Voting systems can also help to build consensus through focused questions.

Identify your audience
Learn more about who is in the room (occupation, gender, region, department, training level…) and about their preferences and opinions. Or test their level of expertise.

Dynamism
When used during a presentation, voting allows you to adjust your presentation on-the-fly, using the feedback you get from your audience. Did everyone understand everything? Is it possible to decide on the next step? This is also ideal for keeping people awake after a heavy lunch.

Consensus
Gauge whether your gut feeling meets with the audience's approval, so you'll know whether they will back your decision. By cross-referencing the results with the voters' previously recorded characteristics, you can get a clear insight in the consensus per subgroup.

Brainstorming
During a presentation, a question may rise that you want the entire audience to give their opinion about. You can enter this ques-tion into the system and the audi-ence is then able to vote on this question.

Employee satisfaction survey
Give your employees the opportunity to anony-mously give their opinion about subjects you would like to get more information about.

Determine rankings
Provide a number of alternatives and allow the audience to rank them according to their preference.

Knowledge testing
Show your audience the correct answer to the question you asked. This allows you to immediately explain the question and the corresponding answers.

Has your message been received?
During or after the presentation you can ask a question about the contents of your pre-sentation. This way, you will know whether your presentation was clear to your audience. Do-ing this during your presentation allows you to adjust your presentation on time!

Gaming
Throw in a quiz as a welcome break: it cheers everyone up and helps them to focus again. The computer can track response times or assign penalties for incorrect answers. A cleverly-designed quiz can also provide you with interest-ing information.

Anonymous or not
You can link the voting system to a database of participants, allowing you to record the results of individual participants. You can divide participants into groups and you can review results per group.

Evaluating
What did you think? On a scale of 1 to 5, for example. Maybe you can see opinions evolving as the meeting progresses?

Internet voting
Using their smartphone or tablet, participants can vote in real-time, from another location.

Multiple voting
1 voting keypad can record multiple votes about the same question.
The outcomes of various votes can be merged.
1 voting session can be held simultaneously across different sites.

INTERACTIVE VOTING

INTERACTIVE VOTING : TECHNOLOGY & REQUIREMENTS

duvall's interactive voting system is wireless and digital, flexible, yet simple:
- The voting keypads are simple and user-friendly.
- The software is flexible and allows for importing audio, video and other files
- The results are projected immediately, if necessary, during the voting.
- It allows to immediately cross-reference the results.

Voting can be done anonymously or with identification (via an ID card).
Detailed results are available in digital format (JPEG, Word, Excel...)

duvall provides :
- voting Station + voting keypads + (possibly) ID cards
- laptop with IVS Pro software + licence key
- creation and programming of the voting script.

You will receive a comprehensive briefing about
- how best to present your questions
- how to instruct the audience in the use of the voting keypads
- how to present the results

A **duvall** technician operates a dedicated voting computer, which is different from the computer running the PowerPoint presentations. In other words, a switcher will be needed to switch between the PowerPoint and the voting.

We need in advance:
- The questions and answers (+ indication of the correct answer, if applicable)
- Visuals, e.g. a PowerPoint slide model, to give the voting presentation the same look-and-feel as the other presentations
- A list of participants (to program the keypads for identified voting)
- A script of the event

We would like to have everything (questions, visuals, participants, script) at last one week before the event. Last-minute changes, such as adding or adjusting questions are always possible (even during the event).
Do not hesitate to contact us for more information or advice
